# **FOOD SYSTEM SUMMIT**

4 Corners Region

**SAN JUAN WATERSHED**

A “**community food system**” is one in which sustainable food production, processing, distribution and consumption are integrated to enhance the environmental, economic, and social and nutritional health of a particular place.

### **Important stakeholders:**

- Locally elected leaders
- Food and agriculture agency representatives
- Farmers or groups interested in sustainable farming and/or farmland preservation
- Food banks and anti-hunger advocates
- Cooperative Extension and other relevant university faculty
- Public health workers and nutritionists
- Environmental and sustainable community advocates
- Parks and Recreation Departments
- Gardening organizations
- Food processors, retailers
- Small business support and local lending institutions
- Interested community members

One of the keys to building a successful community food system is developing connections between diverse stakeholder groups.
